This might be a rather basic question, but it seems to be difficult to find it written down explicitly: Let M be a topological manifold and $p:E\rightarrow M$ a G-principal bundle for a topological group G over M. Is there a topological group H together with a continuous left action on M such that the bundle $p:E\rightarrow M$ is a real bundle retract of the G-principal bundle $M\times_H G\rightarrow M$? Clarification: The group G and the principal bundle p are assumed to be topological. Therefore, the topological group H and the left action should be continuous. A: Given a topological space X and a continuous action of a topological group G on X, the action defines a topological groupoid $(G\times X)\times X\rightrightarrows X$ with domain and range maps given by c6a93da74d
