Both Lightroom and Photoshop (with the appropriate subscription) enable you to manipulate your images easily. Create, fine-tune, and apply filters (color correctors and lens filters) to your images as well. ## Adding Text and Line Art Text and line art are useful for both expressing information in a photograph and creating a graphic design for print. (besides practicing on the mains) I've been playing DOTA since sc2, and am completely burned out on the game. (I'm on TL - BF HL) I've played up to Game 6 CS in the past, and even did ranked during the beta. I've been looking at the e-sports stuff on dotawiki, but I can't find anything that says that dota 2 is a good transition game. I'm looking for games that you would play for like 15-20 mins, and then you get done with it and can play other games instead. do you have a computer you can play them on? try some of the old maps/mods of League of legends that are still on the site, you'll see they play similar to dota, its all about your build and decision making. Hey you should definitly learn some basic

Q: Yii2 on Windows 10 vs Ubuntu 16.04 I am trying to install Yii2 on Windows 10 vs Ubuntu 16.04 for my project that will be deployed in the cloud. On Ubuntu, I can install the Yii2 web client with one command $ yiic web I don't see this command on Windows. I have to go through an FTP address to make sure I can see an app.php, because it's not in the path by default. I can make it work on Win. 10, by using the code below. $ Yii::setPathOfAlias('@app', __DIR__. '/../../app'); $config = require __DIR__. '/../../app/config/web.php'; Yii::createWebApplication($config); But, is this the way to install Yii2 on Windows 10? I don't like this because every time I have to do this, which means even if I need to make only one change, I have to re-install all the tools I need. It's also a lot of manual work, I feel there should be a better and cleaner way to do it. A: I think best solution would be to create a VM instance with Ubuntu and install the latest version of Yii on it. Then, you can be sure that everything will work fine and you will be able to update your project easily. You can find a lot of information about how to do this on the Internet, just googling. result = std::chrono::duration_cast(this->d_time.time_since_epoch() + rt_s, t); return *this;
