Hi,I am trying to create a custom drive in the local folder.The Default drive is the first drive in the list so it is not possible to create a custom one. iTunes is a good tool for managing media. It's a music player for Mac, iPod, iPhone, iPad and iTunes (PC). It provides many features for managing media like Playlists, Genius playlists, Smart Playlists and so on. It also manages iTunes U account. A playlist can be managed as a collection of songs, which makes it suitable for keeping the music in your MP3 player or iPod. It also supports a lot of other media formats including video, audiobooks, and podcasts. You can make a playlist, add songs, edit the order, or delete the list. You can also add additional information about the playlist, such as whether it is private or public. To add or edit the playlist: - Open iTunes, and then choose Edit > Playlist. - Type a name for the playlist, and then click Add. - Click Edit. - Select the play order, and then click Move Up or Move Down. To find songs: - You can browse the iTunes Library. You can use the Search feature to find songs by name, artist, album, or even by a genre or tag. - Click the Playlist menu on the left side, and then choose Recently Added. You can choose music, audiobooks, or podcasts. You can also use the Search feature to find songs, audiobooks, or podcasts by name. You can also download songs, audiobooks, or podcasts directly from the Internet using iTunes. The iTunes Store offers a wide range of audio content from musicians and recording studios. Click Download music, or click the button on the right side of the iTunes window. The Downloads window lets you browse through available content from the iTunes Store. You can click the artist, album, track, or song to get information about the content

It features a list view for file icons, as well as preview images. Grumby Description: Grumby is a free file manager application which can be used to work with folders, files, and everything related to them. It features a list view for file icons, as well as preview images. The working process of the file manager application is very simple: open your default file manager, click on the folder you want, and boom – you will be presented with a list view of the contents of that folder. Choosing an icon will display a preview of the chosen item, while clicking on the display name opens the corresponding file in your file manager window. The file manager application is most useful if you need to see everything contained in a folder at a glance, but cannot browse through it by clicking on files in a list view. In other words, you can use this file manager application to access and browse through folders and files easily. 09e8f5149f

Free version is only for LAN connection and doesn't support file transfer. You will get an automated message on any computer that is not in the local network list. Free version allows you to use any computer name in the list. And again, as mentioned earlier, don't forget to download the trial version of K9copy; it's the 'closest' linux program to use for converting avi (or mkv for that matter) files to dvd format. :-)

Anyway, I was curious to see the answer to my question, and here's the findings. If you want to convert from avi to dvd, one of the best programs is K9copy. You can get k9copy here I posted this reply on the thread at azzul: Hey there, Try Rocket IO too, its fantastic. I use it for file transfer across networks.
