KEYMACRO is a Java command line macro editor. You type text on your keyboard and then at the end of a line press a hotkey. If the hotkey matches the text, the keyboard buffer is modified. Current Features: Changes to macros are read from and written to a special file called a macro file. Macros can contain formatted text and can refer to other macros. Macros can contain text and formatted text, and can refer to other macros or text. Text is stored in a character buffer. You can use the editor in two modes: Mode 1 allows you to edit the existing text. Mode 2 allows you to create a new macro file. This mode does not create a macro file when you exit. RUN Mode: To execute a macro, you can enter the RUN mode. After executing a macro, you can view the text of the buffer, edit it, and run another macro. RUN Modes: Run mode is divided into five categories: macros run macros edit macros run macros edit macros Type RUN mode: macro macros macros macros RUN macros macros macros Return from RUN mode: RETURN mode: All text is stored in a buffer.
