Photoshop 2020 (version 21)

Figure 19-1: Photoshop can be used to alter and manipulate raster images like photographs, graphics, or logos. Here are some characteristics of Photoshop to be aware of: Image size If you open a file in Photoshop, it opens in the default editing window (Figure 19-1) with one large layer (the active layer). Each image you work on has a layer, and the layer controls how an image appears onscreen. Most images begin with a single large layer. If you click the Smart Objects button and then the Layer Settings button, you'll be able to see the pixels for an image. This feature enables you to work on a subset of pixels and effect the rest of the image through transparency, at which point you can move those pixels around and create new shapes. You can duplicate a layer by pressing Command/Ctrl+J to create another copy of a layer, which can then be resized, moved, and flipped. You can save your files as a Photoshop.psd file, which will retain the image layers intact and be compatible with other editing programs, such as Photoshop Elements. In other words, you can edit an image you've saved in Photoshop without having to recopy your work to a different program. Layers Each layer in an image file in Photoshop has three important functions. The first is that a layer can be placed on another layer (Figure 19-2). When you apply a new layer, you can either click the New Layer button (located at the bottom of the Layers palette window) to create a new layer, or select the area of the image you want to work on (often by using the magic wand tool), then select Layer→New→Layer from Background. Note: If you accidentally delete a layer that contains other layers, you can always clone the layer or save the image as a.psd file, which will preserve your image. The second function is that the layer can be used to mask out portions of another layer. If you use any of the selection tools (lasso, magic wand, polygonal lasso, rectilinear lasso, and so on), the tool will create a selection mask that shows where the selection area overlaps other parts of the image. You can also mask out portions of an image using the Free Transform tool (Crop, by pressing Shift+Ctrl+E). Click the Free Transform tool (it's located in the Toolbox)
