and vocals simulation. Sound reproduction is done with a high degree of fidelity, meaning the decay, dynamic, and transient response should be maintained, but there is always the possibility of applying various modifications using the dedicated knobs. You can, therefore, assume full control of the specifics of any spring tone. Aside from that, stereo panorama can be generated via the stereo mixing matrix of wet and dry, and the EQ Unit is equipped with tools that bring close at hand the following three parameters: Gain, the Q factor, and Frequency.
