It enables you to manage light intensity, fade the brightness, dim lights and change

What's New In Cue Player Lighting?

Cue Player Lighting is a handy utility that was designed to be used for controlling the lights in a show. It enables you to manage light intensity, fade the brightness, dim lights and change colors. With Cue Player Lighting you can also loop cues and blackout all the lights by pressing a single button or key. With Cue Player Lighting, you can instantly lock the lights, fade all the lights (full brightness), dim all the lights (half brightness), fade all the lights (low brightness), darken all the lights (dark), turn the lights on and off, change the colors of the lights and freeze the lights for time-stamping. With Cue Player Lighting, you can assign colors to the lights and modify the colors to your liking. You can then freeze the lights and change the colors on-the-fly. You can also enable a single color light to fade in and out and make it a flicker light. Once you've set the color for the light, Cue Player Lighting remembers it. With the color that you've set, Cue Player Lighting remembers the other lights and colors for that light so that you can easily match up the colors and fade all the lights at the same time. Cue Player Lighting can loop cues and blackout all the lights. If you are looping a cue, you can also trigger the lights to be off at the end of the cue and then turn on again at the beginning of the next cue. How to Use Cue Player Lighting: 1. Hold down the button for the light you wish to operate. 2. After the Cue Player Lighting menu appears, select the function you want to use from the list. Cue Player Lighting Menu Note: With Cue Player Lighting it is important that the firmware is updated and the program is configured and saved to the correct light type and channel. With Cue Player Lighting, the light is not necessarily connected to the engine, so you will not be able to control the light directly from the engine. If the light is connected to the engine, you will be able to see the light under the menu option. Cue Player Lighting is controlled by a script. The script is saved to your show configuration in the menu. The script is set to launch automatically after the show is initialized. When the light is connected to the engine, the script will run through the following steps before executing the function: 1) Find and connect to the light connected to the engine. 2) Determine whether the script is being executed through the 1D editor, a loop, the Truss or multiple loops. 3) If the light is connected to the engine, execute the script function. The Cue Player Lighting software is designed for controlling only full automation lights. Cue Player Lighting cannot control PROFILES, CHANNELS, SCRIPTS, EXTERN
