● FortKnox incorporates military grade algorithms to make sure all of your data is safe and sound. What's better than protecting your data against the government? FortKnox can safely secure all your important data, including documents, files, and folders, and even activate its customizable lockout option to lock your PC from the outside. ● Lock all windows, drives, and folders with just one click. FortKnox gives you the opportunity to set a custom password for each drive, so even if someone gets their hands on your laptop, they won't be able to get into your important files. FortKnox also automatically locks your PC when it is powered down, so no one else can access your data once you shut down your laptop. ● FortKnox encrypts your data with file-level encryption, and it makes sure that hackers won't be able to access your most sensitive information. Using Blowfish, MD5, and CryptAPI, FortKnox can make sure that no one is able to steal your sensitive information if they manage to get into your laptop. ● FortKnox also includes a built-in print protector to make sure no one can take a copy of your documents. FortKnox automatically changes the time and date of your document files so that no one will be able to assume that they're old. FortKnox encrypts documents in just one click, and it can automatically encrypt sensitive information such as credit cards, bank account numbers, and other payment information. ● FortKnox also includes a built-in autorun remover that will delete all your hidden files and folders. This way, you won't have to worry about accidentally giving your important data to your ex by accidentally deleting a file. ● FortKnox can be a passive monitoring app. Just activate 'Lock' and any unauthorized access to your computer will automatically be recorded. FortKnox can automatically record and log keystrokes and mouse events so that you can review your computer usage and see how your system was accessed. FortKnox includes a detailed log of every action your laptop did, so you can easily find out if someone got into your PC. ● FortKnox also includes a power log, so you can be sure that your system is always completely powered off. ● FortKnox also can be customized, so you can activate/deactivate your programs, adjust settings, and activate/deactivate Windows systems. FortKnox is a powerful tool for advanced power users that want a solution to secure their data

FortKnox is a security software app that allows users to encrypt files and data, while also being able to tweak PC settings. It provide users with a whole bunch of tools to improve their systems' security. Minimal graphical user interface The overall GUI is pretty basic. Users get access to just four buttons that apparently do all the security needed. Split between 'Lock,' 'Unlock,' and 'Show Locked Folder,' the entire app is supposed to combine unbreakable military grade algorithms in order to keep one's files safe and sound. Focused on security Fort Knox claims that it combines incredibly tough algorithms such as MD5, Blowfish, and CryptAPI in order to guarantee an unbreakable security system for your personal data. The program apparently can lock, hide, and protect folders, drives, and documents, while providing unique files for all passwords. If users plan to implement deeper restrictions on selected drives, they can disable registry editing tools, display settings, and even the 'Run' command. In case of extreme cases, it can even deactivate the 'Shut Down' command. The level of restriction to protected items is so extreme that the app can disable 'view folder' options or even'save settings on exit.' Users can basically put all their data in one drive and effectively lock it down completely. This application basically piles up tons of security methods to ensure that it makes right when it comes to keeping your data safe. Conclusion FortKnox is truly a powerful program built to stop at nothing when attempting to secure important information. It uses over three major encryption methods, and it will override, if needed, major operating system commands like 'Shut Down' or even the Command Prompt. If you ever felt insecure while using other security programs, FortKnox will probably change that perception about what true system security really means.
