KeyMacro is a free utility for Windows (XP, Vista, and 7) that is designed to replace the native keyboard hotkeys in the operating system, making it possible to assign your own hotkeys for a wide range of different tasks. The application also comes with a useful set of "actions" that will allow you to automate some of the most common tasks and actions that can be performed on your computer. Of course, in addition to all of these great features, the main goal of this program is to create virtual keyboard keys and assign them to different functions, so that they can be triggered by using an on-screen button on your keyboard. With the help of KeyMacro, it is possible to easily create shortcuts to launch specific applications, perform frequently performed actions or perform something specific when a certain event occurs. As you can see, this app is truly a

great solution for people who need to use their computer in different ways and perform a wide variety of actions, each of which can be easily assigned to a new shortcut key. KeyMacro features a clean and well-organized interface which makes the installation process extremely easy to follow, with just a few clicks required. The application allows you to assign shortcuts to various different functions and actions. You can easily create new shortcuts and edit existing ones to add new or modify their existing parameters. Just select the button on the keyboard that you would like to use for each of your shortcuts and you will be presented with a dialog box where you can create a new shortcut that will use this button to perform a specific action on your computer. All you need to do now is to configure the parameters that will be triggered when you press that specific button. You can use the parameters of the shortcut to automate an important operation or perform a specific task that you perform regularly. Actions can be assigned to each of the shortcuts that you create, so that they can be triggered when you press the appropriate hotkey. It is important to note that the application only supports keyboard buttons from the standard Windows keyboard. Tomboy is a free and open source to-do application for Microsoft Windows that you can use to manage your daily tasks, calendar and appointments. The program is written using the GTK+ toolkit for Windows and allows you to sync notes and tasks from your computer to a service that can be accessed from a Web browser. You can use Tomboy to store notes and other information that you can create in the program and share it with other 1d6a3396d6
