SMTP Mailer X64

If you have looked for a reliable, easy-to-use email application with a nice user interface, this is what you need. SMTP Mailer is a fully featured command line application which enables you to send email messages from any command line interface. You can specify the email address of the recipient, and optionally the sender. If you want to send a CC or BCC, simply provide the email addresses as list. It also supports multiple email attachments. With SMTP Mailer, you can completely automate email delivery with no user intervention. The mailto: protocol was implemented in SMTP Mailer to allow it to send emails from any program that uses the mailto: protocol. Download: Source: It is a command line mail client. It is written in Perl and uses HTML for the output. It can send and receive mail through either of Postfix or Exim. It can send mail to multiple recipients using different methods. Features: This tool is intended to be as easy to use as a GUI client, yet have the same capability. It is written using Perl and was designed to be easy to learn to use. Download: Source: Mailing List is a free desktop application for managing a mailing list. It supports mailto:, imap and pop3 as SMTP servers. It is written in Perl and uses HTML for the output. It can receive emails and display them as well as export the emails in a format that can be imported into Mailing List. It can send emails to multiple recipients using different methods. Download: Source: Lists is a Perl library and command-line tool for managing mailing lists, using the Mail::Maildir MIME format. It provides a simple to use command-line mail client that supports SMTP, imap and pop3 as well as several SMTP servers. It also

What's New In?
