Web front end for Gutenpy. \$Id: index.html,v 1.2 2006/09/15 07:06:13 nanefo Exp \$ 1. Technical Field The present invention relates to a technique for performing spatial light modulation. 2. Related Art In recent years, in an image forming apparatus that forms an image, a technique that performs spatial light modulation by using a liquid crystal panel having a plurality of pixels is in practical use. A polarization beam splitter or a polarized beam splitter is provided on a light path of an illumination light to a liquid crystal panel. Accordingly, the spatial light modulation is performed by utilizing the polarization property of light. JP-A-11-286690 is an example of the related art. In the spatial light modulation, it is preferable to attain high contrast. As one of a cause for non-uniformity of a contrast, a spatial modulation characteristic of light is considered. In an image forming apparatus, for example, in a case of providing a color filter for each pixel, the reflection at the color filter may cause a change of a phase difference in an incident light. As a result, the light incident to the liquid crystal panel is influenced by the reflection at the color filter. Thereby, the modulation efficiency may be deteriorated.
