AutoCAD is the industry standard for Computer Aided Design. It was developed by Autodesk, which is the world's leading provider of 2D and 3D design software. The 2D version is more common and easier to use than the 3D version, so we'll use AutoCAD for most of our examples. How AutoCAD works Here's a typical flow of drawing in AutoCAD: Step 1 You open the application, choose the project file type, and open your drawing. Step 2 The application places a "new drawing" icon in the toolbar. The icon changes to a pencil after you add a project to the drawing. Step 3 If you select the icon, you can start drawing your project. If you just click on the icon, it opens the drawing in a new drawing window. You can continue to edit the project until you're satisfied with your drawing. Step 4 The toolbar and drawing window can be customized to your preferences. These tools, as well as the drawing window and commands, are all accessible from any window by using the View Menu (right-click on the menu bar) or by clicking on the tool. Drawing Window The drawing window is where you place and edit your drawing objects. You can also insert multiple drawing objects at once. Click to enlarge The drawing window can be resized. The various drawing objects can be resized and rearranged in any way you like. By clicking and dragging on the edges of the window, you can change the size and position of the drawing objects. Click to enlarge You can also change the size of the drawing window by dragging the top border of the window. When you release the mouse button, you'll see a resize cursor. Drag the mouse while you hold down the mouse button, and the window will automatically resize. Click to enlarge The drawing window is not a real window that you can close. It is a program-managed window, which means that it remains open and responsive in the background while you work in your drawing. You can work with a drawing window open all day and still have the ability to switch to other drawings without losing your place. Once you're satisfied with your drawing, you can
