Windows 7 Version 2007 introduced a new API named Dynamic Link Libraries. The function can be found in the "API's and support" menu. The API allows users to create .NET components that can be installed and run directly in AutoCAD. A .NET component is a self-contained unit of software that can be easily distributed, and can be imported, used and easily updated from other software. Dynamic Link Libraries enable developers to extend AutoCAD's capabilities with new features and functionality. AutoCAD Map 3D and AutoCAD Map 3D Mobile Edition have their own API's: AutoCAD Map 3D have their own API's: Map Objects, Attributes, Texturing and Attributes, Map Layer API's, KML functionality (fills, lines, polygons, points, etc.), Base Operations. AutoCAD Map 3D Mobile Edition has their own API's: Map Objects, Attributes, Texturing, Attributes and their Base Operations. AutoCAD Map 3D Mobile Edition also has a limited version of KML functionality. Autodesk Exchange Apps, Autodesk Exchange Web Service (AWS) and Autodesk Exchange API provides the functionality to import/export work orders, search for objects, search for viewports and annotate drawings. AutoCAD R14 introduced a new API: SPX (System Processes eXchange). Its purpose is to make it easy to access other AutoCAD features and functions, such as input and output channels and external applications. For example, an application could use the SPX channel to read and/or write a figure to the output channel to make changes to a drawing before sending it back. XML (XML Data Exchange Format) The XML format allows the files to be read from other applications. XML files can contain layers or graphics, coordinate systems, notes, blocks, layers, layers/groups and blocks/groups. For example, an architectural drawing could be in a format such as DXF, DWG or DGN. An architectural drawing could be stored in an XML format. Some XML file formats have a predefined set of commands to automate the layout and design of the file. These commands are contained in a "namespace" which indicates that the commands should be associated with that particular file. The XML commands are often stored in an associated file.
