1) Installer This is the first time you run this application. You can select the components to install, or choose the default option and accept all the necessary options to setup your system (including the Windows 10 Anniversary Update). 2) Options Here you can select the edition of Visual C++ runtime packages you need to deploy, the runtime edition, the target architecture (x86 or x64), and the Runtime SDK version. 3) Ready to deploy Here you can see the list of components, editions, and runtime SDK versions that have been successfully selected and deployed. 4) Ready to uninstall Here you can see the list of components, editions, and runtime SDK versions that have been successfully selected and that you need to uninstall, in case you want to remove any of the installed Visual C++ runtime versions. 5) There are 2 ways to deploy Visual C++: - Choose either the default option (used when you do not have an idea what you need, like when you are not sure if the Visual C++ Runtime x86, x64, or Windows 10 Redistributable for Visual C++ is needed) or - Select one of the runtime packages needed by the application you want to deploy. 4) The selection of the runtime packages you need can be combined with the selection of the runtime edition (e.g. you can select the x64 edition of the Redistributable package, and the x64 edition of the Redistributable SDK version). 5) To check the runtime editions and the runtime SDK version that you need, you can use the field on the left (click on the field to show it) to see the exact versions that are needed. 6) The field on the left can also be used to select which runtime packages you need to deploy, in case you need to install all the editions or just one of them (only the editions you need are displayed). 7) The list of installed Visual C++ runtime editions are displayed at the top of the page. 8) The list of installed Visual C++ runtime SDK versions are displayed at the top of the page. 9) To check if the deployment has been successful or not, you will see a message displaying the status of your deployment. The status information is stored as a log file, and you can retrieve this information by selecting the button at the bottom of the page (results for all the packages are displayed here). 10) You can select any package from the list and see

AIO Runtime Libraries Crack

AIO Runtime Libraries are a library of statically linked components for installing Microsoft Visual C++ Redistributable (VC redistrib) for x86 and x64 architecture. They are built to be faster than Visual C++ Runtime (VCRT) in many cases because they provide only the libraries and no executables that typically come with Visual C++ Redistributable. When used with a AIO Runtime Authoring tool (such as MSoft AIO®), they provide the x86 and x64 versions of the VC redistributables. AIO Runtime Libraries includes: AIO Runtime Components for Microsoft Visual C++ for x86 and x64 platforms. The components are static libraries that allow you to use Visual C++ Redistributable without deploying a full Visual C++ redistributable package. This is particularly useful for .NET developers when they want to deploy to x86 and x64 target platforms and don't want to maintain multiple redistributables. This application is compatible with all versions of Visual Studio 2015. Note: AIO Runtime Libraries is currently in the early stage of development. We are continuously improving the application to provide a better experience for everyone. If you have any comments or suggestions, please let us know in the comments below or on the AIO Blog. Please note that the application is in the early stage of development and the current version may not be fully functional. We appreciate your feedback and input on the product. AIO Runtime Libraries should be used at your own risk. Note: The listed x64 runtime is a trial, the license for which can be found here (it is also known as "x64 Developer Runtime"): Changes from previous version: Microsoft Visual C++ Redistributable for Microsoft Visual Studio 2015 v14.0.24234.0 Fixes: Fix for build on Windows 10 systems with Visual Studio 2015 versions earlier than 15.1. Fix for crash on Launch on x64 systems. NOTE: The AIO runtime libraries are licensed as Shareware. AIO Runtime Libraries License Limitations: AIO Runtime Libraries is in an early stage of development. There is no way to guarantee the application will function without any problems. The runtime libraries are intended for testing and demonstration purposes only. It is advised not to use it in a production environment. This is not a production-ready application.
