$\times 10^3 \text{ cm}^{-3}$, which is about 4 times the critical densities for the $J=1-0$ line (0.17 Mpc^{-3}). The source may be a young massive stellar object (YSO). Massey et al. (1995) found out the existence of a main-sequence star with an OB-type nucleus in a star-forming region of 30Dor.

It's interesting to note that the electron temperature is higher in the star-forming region than in the cloud far away from 30Dor. This may be due to a heating process near 30Dor. 3. We can see from the CO data that the molecular hydrogen distribution is much more complex than the hydrogen distribution. 4. There are some indications that the molecular gas has higher

velocity components than the atomic hydrogen. This seems to be related to the high speed molecular gas ejected from massive stars. 5. The CO line profile is skewed with a high-velocity tail. This is probably due to the stellar wind from massive stars. The higher the star's mass, the higher the velocity of wind. 6. It has been seen from the CO maps that the CO lines from both sides of

the peak have a broad wing which is obvious toward a particular direction. Therefore, we regard it as a proper motion of the molecular gas. 7. The fact that the expansion velocities of the molecular gas and the ionized gas are nearly the same may be due to an interaction between the expanding shell and ambient gas. What's New In?

One of the most important qualities of a leader is to be able to empathize. That doesn't mean you hand-hold; it means you step in when your subject is facing trouble. Hillary Clinton used her political

experience to remind Sanders' supporters of the limits of his campaign: "I know, because I've been there before," she said. In my experience, people who are likeable also tend to be open to admitting mistakes. Overall, these qualities are most useful in contexts where someone has to persuade someone else. And that's why leaders often fail. Even when you fail, the failing

can be instructive; the most successful figures in history had an “I got shit done” mentality. Think of the huge list of things that Henry Ford failed at but eventually came up with products that transformed the world. These failures weren’t fatal but they helped Ford learn what he needed to succeed. I guess you could argue that Donald Trump is a successful leader, at least

since he took office. But he's not an example that I can point to. So the real question is: What have successful leaders taught us? Mike Gatto will be leading a workshop next weekend at the Art of Leadership Institute's Annual Leadership Conference, "Managing Change: Leadership and Learning in a Fast-Moving Organization." Sometimes it's a matter of personal opinion, but for many people the skin of a banana is considered a delicacy. Whether that's due to its texture or to the abundance of flavour and nutrients that it contains, there's no doubt that the

banana skin is something of an acquired taste. Why are bananas associated with summer? Bananas are more than just a summer fruit – they are one of the symbols of our diet, are they not? Banana is the staple fruit of an estimated 3.4 billion people and it is easy to understand why. The banana is a unique fruit: it combines sweet, sour and bitter tastes in a single fruit, meaning that it

has to be eaten with great care as, despite its sweet taste, it is very hard to eat. Depending on the type of banana, the starch that makes up most
