Q: python: Efficiency of using {} to group match sets I often need to match sets of dictionaries by groups. Often the dictionaries have the same names in different groups. For example: # variables have the same values as key:values pairs groups = {'a': 'foo', 'b': 'foo'} dicts = {'a': {'k': '1', 'v': 'hello'}, 'b': {'k': '2', 'v': 'goodbye'}, 'c': {'k': '3', 'v': 'shalom'}, 'd': {'k': '4', 'v': 'good night'}} I'd like to get a list of dictionaries where each dictionary contains dictionaries with the same keys, but only the values of the final dictionary in the list. The objects in the list must be of the same type. Example: # desired output: [{'a': {'v': 'hello'}}

### **Features Key:**

### Gear's Review

Burning clowns. That sinister puzzle is a perfect metaphor for what watching Burn, Clown, Burn (aka DCBF) is like: you don't know what to expect, nothing is predictable, and anything can happen in the game. To help make this all possible for you to experience, we've put together an early review of DCBF.

Features a variety of minigames, including a couple stand-alone rhythm games.Q: Multi-dimensional array-like object in Python Is there any multi-dimensional array-like data structure available in Python? What I mean is something like this, in C/C++ (not python syntax): `int[] my_list; my_list[0] = 1; my_list[1] = 2;` I know it is not exactly array, but would be very useful if we could have an array-like object for multiple dimensions, or if there exists a very powerful data structure (like array) which can provide a very fast access to any of the elements. A: Yes, there are many such structures; one of the most frequently used is the dictionary, which supports a list of keys; they are actually iterables of keys, and the length of the list can be dynamically changed by adding more entries to it. Here's an example using a list of pairs; given a list of keys, it will set all the given keys to a given value: `>>> keys = [('a', 'b'), ('c', 'd')] >>> map(set, zip(*keys)) [{'a': {'b': {'c': {'d': {}}}}, {'c': {'d': {}}}, {'a': {}, 'b': {'c': {}, 'd': {}}}]` You can also use a dictionary as an ordinary list, so that you can use methods like `add`, `del` and `setdefault` to change the dictionary: `>>> keys = [('a', 'b'), ('c', 'd')] >>> map(set, zip(*keys)) [{'a': {'b': {'c': {'d': {}}}}, {'c': {'d': {}}}, {'a': {}, 'b': {'c': {}, 'd': {}}}] >>> map(set, keys) [{'a': {'b': {'c': {'d': {}}}}, 'c': {'d': {}}}, {'a': {}, 'b': {'c': {}, 'd': {}}}] >>>`

## **What's new:**

**Crusader Kings II: Songs of Prosperity or Songs of Prosperity for Crusader Kings II is an expansion for the strategy and grand strategy video game Crusader Kings II developed by Big Behemoth. It was released on January 23, 2015, nearly 6 years since the game's initial release. The expansion features two new civilizations and features themes related to religion and economics. The expansion features a new religion system which allows players to pit individual rulers against each other with their followers and directly convert individual members to their own cause. The religion system is integrated into the deformed and "perverted" medieval society philosophy system; thus, rulers are able to settle wars with the help of rebellious followers. The new religion system also has a city and province level effects, and is included a new religious border with the rebel provinces added in the expansion. The expansion also introduces a new money system, which aims to de-emphasise other materials, and to make them better suited to the medieval context. The new system also includes a new approach to warfare with siege weapons and siege engines that affect how cities are and on what a certain scale. One of the major themes of the expansion is the subject of economics, as players are given new provinces and vassals that are based on the new "Economic Frontier" approach of the expansion. Economy-related events such as free trade, mergers, market share, and taxes are featured in the introduction of the system, and certain prosperity events now even have an impact on the world map. Themes of inter-temporal traps that re-animate defeated enemies into new bodies are also featured in the expansion, and provide an event queue with new interactions with such enemies. Along with the expansion came an in-game manual that documents the tenets and mechanics of the expansion and new features. Gameplay Song of Prosperity contained several new mechanics to Crusader Kings II, including a new religion system with a unique way for rulers to forge and sway followers, and a reworked approach to the economy, with events that can change trading and tax policies. It also featured an expansion of the world map containing 23 new provinces with religious boundaries, characters and**
