As a starting point for your transformation, create an in-place duplicate of the original image. Next, perform your edits. Use layer masks to blend your edits into the original image. Perform any more edits using the layer masks. Finally, save the image for use as a template for future transformations. Figure 1-1 shows an example of how to create a new template image. (For more on Photoshop templates, check out Chapter 11.) Photoshop isn't the only application with layer editing features. Adobe gives you similar functionality in Elements and Lightroom (with the help of a plug-in). Photoshop's editing features are impressive, but if you use the most basic features, they won't get you very far in your image-making endeavours. So Photoshop is a bit too easy to use in that regard. Can you spot the type of edges on the highlighted edges? If so, you have a good understanding of Photoshop's capabilities. **Figure 1-1:** To make a template file, duplicate the original image and perform your edits. You need to know two things to get started in this exercise: how to edit the edges of your image, and how to apply opacity to the edges of your image. For this exercise, you need to know Photoshop's tools for sharpening (so you can edit the highlighted edges, and you need to know how to create opacity masks). I use this exercise because it's quick and it works very well as a confidence-building exercise. It also introduces you to the world of layer masks. If you want to learn more about layer masks, check out Chapter 3. The essential tools for sharpening Photoshop provides four sharpening tools for detecting edges: None of the tools is perfect. The best tool for improving images is a combination of the other three. You will need to use at least two sharpening tools and a blur tool to achieve great results. A third sharpening tool is often helpful when performing large-scale image-altering tasks that include many layers and layers of sharpening. Photoshop users have three tools that work for sharpening: Sharpen, Unsharp Mask, and Bicubic Smoother. Sharpen The Sharpen tool is the most common and easiest to use of the four sharpening tools. When this tool is selected, click-and-drag the tool, as shown in Figure 1-2a, to

A 40-year-old man presented to the emergency department with a 2-year history of tingling pain in the right abdomen and back, localized to the right lower quadrant and right costal margin. He had been consulting a private general practitioner and the pain had not responded to symptomatic treatment. Blood tests showed mild leukocytosis with neutrophilia, mild anemia, and elevated erythrocyte sedimentation rate (ESR). No history of angina, chest pain, other major cardiac symptoms, or pertinent laboratory findings. However, he reported a severe and constant abdominal pain. On physical examination, the abdomen was soft, non-tender, and of normal size. There was mild right-sided costal margin tenderness, guarding, but no organomegaly or palpable tender mass. No significant lymphadenopathy was noted. Abdominal computed tomography (CT) scan without contrast showed a 35-mm homogenously enhancing subcentimeter right retroperitoneal lymph node (RPLN) ([Fig. 1](#F1){ref-type="fig"}). Laboratory tests, including a routine chemistry panel, ESR, and immunologic studies were normal. Fine-needle aspiration of the node was performed. Histopathological examination showed sheets of atypical lymphoid cells with prominent nucleoli but no other morphological evidence of malignancy. Immunohistochemistry showed CD5, CD43, and CD45 positivity of the cells. The diagnosis was consistent with the lymphoma type, low grade. {#F1} QUESTION {#sec1-1} ======== Q1: What could be the diagnosis? Q2: What is the possible explanation for the occurrence of the soft-tissue mass in a patient with lymphoma? ANSWER {#sec1-2} ====== The tumor size and solid and homogeneous enhancement favors a diagnosis of lymphoma. The soft-tissue mass occurred in a patient with lymphoma. There was no identifiable primary malignancy, and he did not report any other symptoms of interest. The tumor size and solid and homogeneous enhancement favors a diagnosis of lymphoma. Lymphomas are derived from lymphoid cells and can be further subdivided into Hodgkin's lymphoma and non-Hodgkin's lymphoma. These tumors can be further classified

The bill would narrow the discretion allowed law enforcement. Moreover, Feinstein asserted that excessive drug sentences were responsible for keeping the country from addressing the mental health issues that spurred such drug use. Graham, though, railed against the harms to liberty and fiscal impact that mandatory minimums bring and called the Senate Judiciary Committee the "most irresponsible place on the face of the planet." What Feinstein didn't mention during her hearing was that she was a prime mover behind the bill to narrow drug sentencing. That's because, in November 2013, she introduced a companion bill to Graham and Schumer's legislation, the 21st Century Safety Act. (Feinstein's legislation also contains provisions that would require a federal grand jury for
