\* \*\*Using the Layers Panel\*\* \*. One of the most obvious things to notice about Photoshop is the Layers Panel (Figure 1-1). It's a window with all the layers and adjustment tools (additions for layers that you can see when they are turned on) listed in the layers of the image you are working on, as well as other tools of which you can use some. Figure 1-1. The Layers Panel on an image with layers turned on, and on an image with layers turned off. Use the following techniques to learn how to navigate through the Layers Panel: \* \*\*You can resize the Layers Panel by dragging the edge of the window\*\* \*. Click the right end of the window and drag to resize the Layers Panel. Resizing stops when you release the mouse button. To move the Layers Panel, click the middle of the Layers Panel and drag it to its new location. \* \*\*You can hide or reveal the layers by clicking the eye icon at the left end\*\* \*. When you hover the pointer over the eye, you see the word `_Locked_`. Click the eye to toggle on and off the visibility of each layer.

Q: How to create unlimited font in Illustrator? I want to create Unlimited font in a version of Illustrator CS5. Some categories of fonts are unlimited like pictures, lines or shapes, but in order to create a font in the same level as them I must pay for Adobe. Is there any way to create these fonts without paying for Adobe? A: As far as I know, there is no way to create a font that has no size limitations other than what the font editor allows. But you can create a font in Illustrator that has unlimited and unrestricted glyphs as well as unlimited and unrestricted colors. This could be done for just a single character. And once created, you can embed that font into any document anywhere in the world. Creating a font is a very complex process and to get complete results with unlimited sizes, colors, etc, you'll need a commercial font editor. Many people use Indesign or other applications such as Calligra or Scribus instead of Illustrator to create font packages to distribute to their customers. A: You may want to consider creating a complete fonts set. You can create unlimited character sets for one or more specific fonts. For example, you may want to create a font set that contains all possible letters of the English alphabet. You can do this by exporting your text based fonts and inserting them in a single font. You can also create so called generic unicode fonts which contains all the letters available. Q: Is it possible to reference a package from a custom script tag? I've recently come across a couple of sites that use package.json's export value to get custom script tags working in a jquery driven app: "custom-script": "node\_modules/somescript/index.js" The custom scripts are in a separate file which can be found at node\_modules/somescript/index.js. I've got a React application that uses webpack for loading scripts and I use the string import feature which means that I don't have any paths at the top of my own html page. Looking at this it seems that the html page is loading the scripts fine. Is there any way to do this? A:

Q: How to get the date from time in java I have a String which has date and time both, suppose its "23/08/2012 11:14".i want to get the date only 23/08/2012. Below is what i tried String date = "23/08/2012 11:14"; String date2 = date.substring(0,10); System.out.println(date2); this is giving me output as 23/08/2012 11:14 and its getting the time too. A: Please follow example 1 example 2 and finally this one System.out.println(date.replace("/", "").replace(":", " ")); your output 23/08/2012 23/08/2012 11:14 23/08/2012 11:14 A: you can just do it like this, String date = "23/08/2012 11:14"; System.out.println(date.substring(0,10)); The output, 23/08/2012 and mean elasticity are shown in Fig. \[Fig:Comparison\] for  $\alpha = 30^\circ$ ,  $45^\circ$ , and  $60^\circ$ . Note that the values of the parameter  $u$  were chosen according to the low-frequency (quasi-static) range of the considered frequency spectrum. As expected, the displacements at higher frequencies are larger when a higher and more rigid hydrogel is considered (cf. the lower values of the parameters  $E$  and  $u$ ). Furthermore, as mentioned above, in the case of the cylinder, the radii of the balls always coincide. \[Comparison of the analytical predictions for the time-dependent displacement field and the average elasticity of the cylinder with the results of the SPH simulations.\](Fig7.eps){ width="80.00000%" } To test the stability of the equilibrium configurations we performed dynamical simulations using Eqs. -. We report in Fig. \[Fig:Simulation\] the comparison of the results of this analysis with the SPH simulations for the time-dependent displacement field for a fixed deformation amplitude  $\Delta z_0=0.01$  and for three different values of
