Shirshov's theorem Shirshov's theorem, named for Ilya Il'ič Širōw (Илья Ильич Широв), is a result in algebra stating that the only difference between a ring and a field is the inclusion of inverses in the field, along with the inclusion of multiplication by zero in the ring. This theorem, proved by Karol Borsuk, also gives a characterization of fields: the only compact Hausdorff semitopological semilattice of height 1 is a one-point set.

Q: The Principal value of summation of monotonically decreasing function The Principal value of a limit is defined as the unique number x such that the limit is the same as the limit of the limit. For example if $\lim_{n \rightarrow \infty} a_n = a$ and $\lim_{n \rightarrow \infty} \frac{a_n - a}{b_n - a} = x$ then $x = 0$. Suppose that $\sum_{n=1}^{\infty} f(n) = c$. If $f(n)$ is monotonically decreasing then $\sum_{n=1}^{\infty} f(n)$ and $\sum_{n=1}^{\infty} f(n-1)$ have the same principal value. Let $g(n) = f(n) - f(n-1)$. Then $0 \leq g(n) \leq f(n)$

- $f(0)$. Clearly $g(0) = 0$, and $g(n) = f(n) - f(n - 1)$ is monotonically decreasing. But $g(n) \geq 0$ only if $n \geq 1$, and it may not be guaranteed that $\sum_{n=1}^{\infty} g(n)$ converges. This problem is much more difficult than just taking a limit. How can I get around this? A:

On November 2, the U.S. Food and Drug Administration announced new regulations that open up the small developer's market. Let's face it, most of the time, patenting a new food or beverage is a tough sell, and even tougher sell if the product is a novel one with little or no competition. Still, in this new environment, the rules have been changed somewhat so that small or new food or beverage patents are now more readily accepted. We are joined today by Mike Van Heel, of the Van Heel Law Group, to talk about the new regulations and what they mean to small or new food or beverage patent applicants. We discuss the significance of these new regulations and how they are favorable to small businesses and their patent
