Learn math in a fun way! Rhyscitlema is a... Read more CardMonster is a fantastic card game where you pick the cards for your hand and try to use them to beat your opponents hands by getting 2 and 3-of-a-kind-pairs. Quick play in every mode keeps your interest and as soon as you like, there are a variety of exciting modes and duel options to play. If you prefer your games to be a little more tense, you will enjoy Poker Royale. Rather than using cards you earn money and you can play against the computer or, if you are more of a real player, you can play with other players. The application starts by asking you to select a casino and then what tables you want to play on, each of which has their own dedicated game, with ten games offered in total. There are no tutorials, so be warned - you may require some dedication to learn the basics. Your hand is displayed on the table and if you want to take it easy and just bet small amounts you can use a simple coin view, which allows you to manage a single bet in the card database. For more serious play you can either use the cash view or the live view and the real mode. The cash view is very simple and allows you to enter money to play with. The live view is very complicated and shows you detailed information regarding the cards you are dealing with. The real mode requires some manual processing but this gives you the ability to play the tables all by yourself or against the computer, depending on your preferences. The application is very enjoyable and the fact that it is free is a real bonus. Each game is completely separate and you can download as many as you like to. The application start-up may be buggy and you may need to use the "action" button in the menu bar to close the program down. The card database can take a good while to load but once it does, you will be able to manage your cards as you like. There is a small learning curve and some players will find it hard to learn a few basic tips, but after that you can get on with enjoying the various game modes. If you like the casino style game then you will enjoy the application. CardMonster runs smoothly and delivers a very enjoyable experience from start to finish. CardMonster is a fantastic card game where you pick the cards for your hand and try to use them
