Do math expressions with just a few clicks, thanks to a smart calculator that is, at the same time, a high-fidelity calculator, a plotting tool and a compiler that can be exported in multiple formats. Key features
Facts
Mathcad support. To create and plot functions, the application can now import and export to Mathcad files. Plots. Create graphs, plot equations and more. The side panel, with its arrangement options, makes it easier to create and arrange expressions. Simple calculator. Most of the elements are the most popular math operators, yet you can customize and use ones you find in your own way. Write your own expression. Express your equation and take it with you when you leave. Export. Convert expressions to an EXE file, which can be run even if the app is not installed. Workspace Full expression edition. When you create a new math expression, you can see the results immediately by rearranging its nodes. Task editor. Arrange expressions and paste your selection to keep the selection together and easily edit the layout to meet specific needs. Move expressions. Move expressions using gestures. Recast expressions. Convert more or less cumbersome expressions to simple ones. Import custom symbols. Use any image on your computer to add symbols. Imports Image files can be imported into new expressions. You can also import image files from other applications. Advanced wizards. You don't need to know much about new forms to create them. Export multiple formats. Generate SVG, PNG, BMP, GIF and JPG image files, as well as EXE which can be run even if the app is not installed, like Mathcad files. Data blocks. You can create lists for easy editing. Save. Save your expressions to be used in other applications, such as mobile apps. 1,3,5,7,9,... Enter any number between 1 and 10, and get back one of its multiples. In-app purchases. Read more about in-app purchases. Discover more Buy a full version and enjoy all features, including several tutorial videos, alternate themes and more! Shop now Hello, welcome to Smath. Solving math expressions with a calculator is not cheating on your set of knowledge, with the device itself being not only faster, but more accurate. Math is at the base of most engineering projects and it even plays an important role in programming, so if you encounter expressions in your work or are looking for a simple and efficient calculus method you need to try out SMath Studio. Intuitive design makes it easy to use In terms of visuals, the application feels pretty fresh and although the interface isn't heavily populated with many visual elements, it's decent enough not to distract your from work, but not too simple to lack practicality. Most of the space is represented by your canvas, cleverly created to resemble a math paper sheet, while all tools, operators and functions can easily be accessed from the side panel that holds them. You don't need a considerable level of knowledge to realize from the moment you launch the application that it means business. The creation process itself is incredibly intuitive and easy to handle by anyone, especially because it can be done without pressing a single button on your keyboard, even if they are numbers. Rich library of operators and functions There's no restriction to creation, neither in terms of arrangement nor elements you work with. The place you click on your canvas is the starting point for a new expression you can later on move around to create a clean layout. This applies to any element, expression or graph you insert, with the possibility to also include external pictures for more flexibility. Given the right combination of functions and expressions, you can calculate pretty much anything related to math. The side panel holds operators for arithmetic, matrices, Boolean, functions, plotting, programming, as well as upper and lower case special symbols. Clever auto-complete and multiple export options By default, calculus is performed automatically, but you can turn this feature off and it comes in handy for preparing a printable test, for instance. All supported functions can be viewed and applied, even on the spot thanks to a built-in auto-complete feature fitted with clever descriptions so you don't get stuck along the way. When done, export options come in handy for different situations. Besides the application's specific format, you can generate a HTML file, PNG, BMP, GIF and JPG image, EXE which runs even if the app is not installed, as well as Mathcad supported files, such as XMCD. All in all Taking everything into consideration, we can state that SMath Studio

What's New in the SMath Studio?

SMath Studio is a powerful personal math studio for Windows. It lets you solve math equations and learn how to deal with quadratic equations, logarithm and exponential. Features: * Many tables, charts and graphs are dynamically drawn from your math expression and expression functions and equations. * Graphs include line, bar, pie, piecharts, polar, area, bezier, parabola, elliptical, paraboloid and hyperbolic functions. * Functions and arithmetic operators are automatically detected from expression. * Multiple export options include HTML, PNG, BMP, GIF, JPG and EXE. * Ability to export to Mathcad. * Ability to import image elements from the web. * Auto complete allows you to display the next character you are about to type. System Requirements: Windows XP/Vista/7/8/10 1 GHz Processor 128 Mb RAM 256 Mb free space on hard disk Additional Notes: This application was created using Free Pascal compiler.
