Newswire NOVEMBER 22, 2001 - 1:10am EST GRAND RAPIDS, Mich., Nov. 22 (Business Wire) -- The new "special series" poker game that visitors can play at the new River Walk casino would be called: Four Deuces or Jacks. Four Deuces is a poker game where players receive special card backs with the four letters "DD." The special series of cards are selected from three decks, and play is at a table for four. The casino would be the first Michigan casino to offer its own special series poker game, according to Tom Mozingo, River Walk Casino President. Four Deuces will be offered from October 8 through November 17, at tables located in the casino. The minimum buy-in for the game is \$25, and tournaments for the game will be held daily through November 17. "Four Deuces is a great way to enjoy the game of poker, and we're excited to bring it to the River Walk," Mozingo said. "We'll offer a decent schedule of tournaments during the first week of the game as well as daily buy-ins, and we'll be offering a variety of game sizes." Joe Marzilli, Founder and Director of Operations at the Delaware River Casino Center, which held a special series poker game for the past four years, said the game has been a great draw for players. "Our visits to the casino have increased by over 40 percent during the past four years," Marzilli said. "Because of our success, we are looking forward to the launch of the new game." About The River Walk Casino The River Walk Casino, located at 90 River Walk Dr., is the

The Kelly Taylor Show - Season 1 - Episode 4: The Glowly Palooza Awards. Liliana Deady #TVGuide. Singer ThatA. Hormonal regulation of neurotransmitter synthesis in the rat medial preoptic area. In the present study, we examined the role of sex hormones in the regulation of transmitter synthesis in the anterior hypothalamic region that controls male sexual behavior. Rats were gonadectomized and sham operated at 50-51 days of age. At age of 60-63 days the sham-operated animals received daily or one time administration of sex steroid hormones for 14 days. Thirty minutes prior to decapitation, the rats received, by intraperitoneal injection, [(3)H]glutamine, [(3)H]GABA, [(3)H]proline, [(3)H]aspartate, [(3)H]asparagine and [(3)H]cystine (precursors for glutamate, GABA, aspartate, asparagine and cystine) or the following amino acids: [(3)H]aspartate (glutamate precursor), [(3)H]glutamine (glutamate precursor), [(3)H]asparagine (GABA precursor), [(3)H]aromatic amino acids, [(3)H]serine (glutamate precursor), [(3)H]histidine (glutamate precursor), [(3)H]cysteine (glutamate precursor) and [(3)H]proline (arginine precursor). Radioactivity in the anterior hypothalamic region, ventral to the third ventricle, and cerebral cortex was determined by scintillation analysis. In the anterior hypothalamic region, the specific radioactivities of [(3)H]aspartate and [(3) 6d1f23a050
