download If you're buying a used vehicle or a boat, do it in a new and beautiful condition and condition. As the boating community grows, so does the demand for used boats. manufacturers of the latest boats will rent their boats for a limited time to help get the newest boat in the rental market. Boat is a fastboat, usually called a "propeller driven" boat. Many of them have outboard motors. Outboard motors are installed on the out side of the boat hulls that move the boat through the water. Many outboard motors are motor-powered because of emissions regulations. Since outboard motors are attached to the boat, they have to be in good working condition so they don't damage the boats. Older boats were more often "turbine driven," which operated via a propeller but also drove an electric generator that powered a central "powerpack," which drove the main shaft of the engine. "Outboard" is a generic term that describes most outboard drives, and some inboard / outboard propulsion systems. A screw drive mechanism is located inside the hull, beneath the waterline; the propeller shaft drives a pair of outboard motors mounted on the hull sides, commonly in tandem. The most common

version has two 25 or 36 horsepower motors. Design The first types of outboards were in existence in the early 1950s, where the outboard motor and its engine were not always attached to the boat, as they often were added as an optional extra. Over the next few decades, this type of propulsion mechanism improved, with different engines being offered and more thought given to which angles and settings of propellers were optimal. Designs have also progressed from the original hand cranked versions to electrically powered versions, with a growing awareness of environmental and safety factors. Larger boats which have been converted into a racing "propeller-driven boat" often have propeller shafts that extend out of the sides of the hull, sometimes around the middle, and over a certain length. This allows the propeller to be farther back and out of the water, and out of the way of the boat. An alternative to this is to have a rear-mounted propeller, with a wide propeller shaft, and a propeller mounted higher up on the hull. 27 May 2011.
