The first, private
(non-commercial)
version was
released in 1981,
written by Jim
Dailey on a Timex

2100X with 512
kbytes of RAM and
a BASIC interpreter
on a Zilog Z80
microprocessor.
The first public beta
of AutoCAD was
released in 1983
and the first
commercial release
followed in 1985.
What was AutoCAD
before AutoCAD?
Autodesk
developed AutoCAD

from its previous products called SPECTRUM, SPECTRUM+ and SPECTRUM+2.

Unlike AutoCAD, these early versions were graphic (graphics) drawing packages for the mainframe.

SPECTRUM was developed in 1977 and first released in 1979. SPECTRUM+

was released in 1981 and added a large number of drawing tools to the product. The last release, SPECTRUM+2, was in 1983 and introduced AutoCAD.

Autodesk's early release software is not only a pure CAD application, but a full-fledged high-

end graphics package as well. The first SPECTRUM products were purely graphic, while AUTOCAD evolved to become more complex, more powerful and more capable over the years. The last version of AUTOCAD that still supports the mainframe was

released in 1985.

After that, AUTOCAD was split into two separate products: CAD and Drawing. CAD focused on the 3D space and drawing focused on 2D space. The AUTOCAD files for the mainframe could be converted into both the 3D and 2D files, but

not the other way around. Autodesk decided to reintegrate CAD and Drawing into a single product that would be available on the desktop computers as well as the mainframe.

The first CAD product, originally known as NEWCAD, was released in 1987. In 1993, it

was renamed to AutoCAD. Why is AutoCAD named after a type of tree?

Autodesk calls AutoCAD "The New Type of CAD" and it's true. One of AutoCAD's features was that it did not depend on any external or specialized hardware to operate. It ran on

ordinary PC's with any kind of screen. If you had a screen that was black and white and a mouse to click around, then you had AutoCAD. New Type of CAD A new type of CAD program, which allowed anyone to draw or design a sophisticated 2D or 3D model using a

simple design tool

India and Russia on
Monday signed a
six-point agreement
on defence
cooperation,
outlining for the
first time the details

of India's proposed purchase of the S-400 Triumph air defence system from Russia. India has been negotiating the acquisition of the S-400s from Moscow since 2012. As part of the deal, the two countries also agreed to a joint development of "a multi-mode

missile system”.
The two leaders
witnessed the
signing of the
agreement in New
Delhi at a joint
press conference.
“The negotiation
process for the
S-400 deal, which is
completed, has now
been launched and
we expect to
finalise this deal in
the near future,”

Prime Minister Narendra Modi said at the joint press conference. India and Russia signed an agreement on defence cooperation in May 2012 and have been negotiating the sale of S-400s. The S-400 system can detect and destroy incoming ballistic and cruise

missiles, and can also take off and land vertically. It can destroy aircraft, helicopters and drones. India's Defence Ministry will be responsible for the S-400 deal, but the ministry has not yet identified the manufacturer for the systems. Russia's state-owned

Rosoboronexport
has already
delivered two
regiments of the
S-400 system to
Iran. In 2016, India
and Russia also
signed an
agreement for joint

What's New In?

Use the Markup Assistant to directly import CAD drawings, or to import CAD objects and then use the Markup Assistant to add markup to a drawing. (video: 1:30 min.) Drawing Templates: Share and open more CAD drawings in your company using the

Templates option.
CADWiz User
Interface Updates:
Replace the
interface by using
the new CADWiz
LUT tool. Choose
from dozens of
existing color
combinations, and
use controls to
swap them at any
time. CADWiz: Edit
CAD drawings that
have previously

been converted to DWG files or CAD sheet sets. Convert DWG or AEC drawings to CAD sheet sets and back again. (video: 3:13 min.) Customization Improvements: Edit your drawing's properties and make non-standard changes. Edit and modify AutoCAD by using the new

Customization window. Grouping Utilities: Create groups from objects in the drawing area or from text. Use control and keyboard shortcuts for access to options. Master Data Management “Master Data Management” is a new integrated option for

enterprise-level
CAD applications to
generate and
manage CAD data
and property
information. It
provides a set of
integration options
to manage data
from other CAD
applications and
merge it with
AutoCAD. New
option for:
Automatically

create geometry attributes from object property values. For example, the object “Name” becomes a surface attribute if you click on it in the Name box.

Generate geometry attributes for the users’ desired data structure. For example, “Name” becomes “Surface

Name.”

Automatically
adjust the structure
of your data after
data is entered.

View and edit entire
file properties and
attributes. Edit
geometry attributes
that exist in a file.

Create geometry
from other data.

Edit existing
geometry. Supports
many major CAD

file formats
including AutoCAD,
AutoCAD LT, NX,
PTC Grasshopper,
JT, MicroStation,
Cimatron, NBS CAD,
others. Integrate
with other CAD
systems like NX
and Cimatron.
Display geometry
with different
projection styles
like isometric,
oblique, orthogonal.
