7. \*\*Choose File\*\* → \*\*Export\*\*. The image opens in the Photoshop window that looks like Figure 2-3. Click the Preview check box and drag the image to a new window. (Then you can close that window, for good measure.) If you're exporting an image larger than its current size, you'll see a preview of the size that you're saving it to. Figure 2-3. Top: A file in the Photoshop dialog box. Bottom: The export dialog box. This sample image size is 736 x 488 pixels. Your results may differ depending on your version of Photoshop and your operating system. ## Using Layers In order to make changes to an image, you need to create a layer. A `_layer_` is a construction element that sits on top of other layers. It's a simple way to separate different kinds of changes so that they're easy to isolate and modify as desired. To create a new layer, click the New Layer icon (Layer) at the bottom of the Layers palette (see Figure 2-4, the New Layer icon (Layer)). You'll see a new layer thumbnail at the bottom of the Layers palette (see Figure 2-4, the New Layer icon (Layer)). In the Figures section of this book, the layer thumbnail is displayed over a blank canvas background. Figure 2-4. Here the New Layer icon (Layer) is hovering over a blank canvas background. To add additional layers, click Layer, as shown in Figure 2-5. You'll see a list of the currently open layers, along with a thumbnail preview of each layer. This dialog box also gives you a handy overview of the image's overall composition. Figure 2-5. The Layers dialog box is good for seeing which layers are open and how many layers you have. A layer is indicated by a checkmark in the top-right corner. In the Layers palette, you can click on a layer thumbnail to see a preview of that layer's contents. As Figure 2-6 shows, you can add new layers by clicking and dragging from the Layers palette to the new layer you want. You can make a layer transparent or opaque by using the Layer menu option (at bottom of image in figure) and choosing either Transparent or Opaque, as needed.

Q: Printing multidimensional array I am trying to print this array. How do I? I tried below code `array('test2'); foreach ($my_array as $key => $value) print_r($value); ?>` But getting an array. And I also tried to print it using `echo`, and I am getting function not found error.

A: The simplest way would be to use `json_encode: array('test2');` `echo json_encode($my_array); ?>` However, you need to use a custom type that you create that has the `[list]` syntax, otherwise `json_encode` will treat your array as a string. This is what this custom type, thanks to the `@Guffa` comment, does: `value = $value; } } ?>` Outputs: `{"value":"test2"}` Example Live demo on [3v4l.org](https://3v4l.org) Notice how in the second example, I had to use `json_encode` in order to get the output I wanted. Q: What's the difference between the Enterprise Remote Control and the Enterprise Remote Surveillance? CES recently released two products that are meant to improve productivity within a corporate business. One is called the Enterprise Remote Control, the other is called the Enterprise Remote Surveillance. Can anyone tell me the differences between these two? Why would a business buy one over the other? A: I've had little contact with the product but it seems to me that: Enterprise Remote Control: Allows a user (who may be in different branches, at different sites or working remotely) to view the context of their system (which apps are running and which projects are open) from a central location. When I looked at the sites I could see that they were working remotely. Enterprise Remote Surveillance: Allows users to see remotely what the system looks like and the apps that are running. I don't know how/if they can report metrics and perhaps how much they can do using the enterprise remote control versus the enterprise remote surveillance. What is Enterprise Remote Control What is Enterprise Remote Surveillance More than likely the two products are related and will be sold together. I'm sure they'll have a couple of extra buttons on the remote control for some of the control functions of the surveillance and vice versa. I'd be interested in seeing the difference.
